The application is a divisional of U. S. application number 09/254,947 filed March 13, 2000, now US patent 6,716,608, which is the U.S. national stage of international application number PCT/JP97?03305, filed September 18, 1997, which, in turn claims the benefit of Japanese application number 8/246749, filed September 18, 1996. Claims 1-6 are pending and under examination.

### **ALLOWANCE**

Claims 1-6 are allowed.

The following is examiner's reason for allowance. Applicants are the first to disclose a hybrid *S. cerevisiae* telomerase in which yeast template RNA has been mutated to human template RNA. Applicants obtained two transformants of *S. cerevisiae* cells that produce humanized telomerase. One transformant comprises a plasmid, which allows for expression of the human telomeric RNA template because the plasmid contains mutated TCL1 gene encoding RNA template of yeast telomerase, whereas the other transformant has the endogenous TLC1 gene located on chromosome replaced by the same mutated gene. Applicants use the transformants to produce humanized telomerase. The invention is free of prior art, nonobvious and has a potential use for gene therapy. Working along this line, Applicants use the transformants synthesizing the hybrid telomerase to produce yeast chromosome or yeast artificial chromosomes containing mammalian (human) telomere repeats; the invention was patented in the US patent 6,716,608 issued on the parental case 09/254,947.
